Promethist Documentation

Welcome to the Promethist Documentation - your guide to creating, managing, and delivering digital personas and applications within the Promethist ecosystem.

This manual is created specifically for those who design and build personas, structure their behavior, assign skills, and deploy them into applications that are to be used by enterprises.

Whether you're a content designer, conversation designer, strategist, or someone responsible for assembling persona-based experiences - this documentation is made for you.

Chapter 1. Purpose of This Manual

- Understand how the Studio is structured and how its parts connect.

- Learn step-by-step workflows for building digital personas and assembling applications.

- Get familiar with Studio-specific terms, components, and best practices.

- Manage change sets and work confidently across different project stages.

- Explore practical use cases that show how personas can be used across industries and scenarios.

This documentation is organized into clear, focused modules. Each section is a practical reference, guiding you through everything from basic concepts to persona deployment - so you can quickly find what you need, when you need it, and stay aligned with your team and product goals.

Chapter 2. Sections

- [Get Started](#)
- [Ecosystem Overview](#)
- [Studio Fundamentals](#)
- [Asset Configuration](#)
- [Application Development](#)
